IREMA-Filter Germany – A global media manufacturer

As an innovative synthetic filter media manufacturer IREMA has designed a new **Eco 4000** series of **synthetic media** comprising electret fibers, thus taking into account the increasing demands related to supporting the energy efficiency of filtration systems or applications. For this new type of media IREMA has developed an innovative and proprietary technology. These new filter media excel in high air permeability and dust holding capacity. Furthermore finished filters made out of **IREMA Eco 4000 MiniPleats** show outstanding technical features.

Beyond that IREMA itself has implemented and maintains an **Energy Management System** for its production of filtration media and further products and thus fulfills the requirements of the **ISO 50001:2011** standard.

About IREMA:

IREMA is a family owned filter media manufacturer in Germany distributing its filter products worldwide. IREMA produces synthetic filter media mainly for cabin air filters, the HVAC industry and also for liquid filtration applications. IREMA's unique 3D-media design features excellent filtration characteristics in the final filter product. Furthermore IREMA provides MiniPleats serving as a primary product for the manufacture of finished filters. Beyond that IREMA is strongly focused on R&D work with regard to customized and new energy efficient filter products in OEM-quality using proprietary machine technology for all in-house production processes.
